

Press Release

Dussmann invests in specialists for industrial digitalization neogramm

- Dussmann Technical Solutions is closing the gap between operational and information technology with this step
- Dussmann is expanding its service depth in automation with solutions for the industrial internet of things (IIoT)
- Stable basis for the further growth of neogramm GmbH

Berlin, 15 August 2023 – The international service provider Dussmann is investing in the industrial digitalization specialist neogramm. With a 25 percent share in the Mannheim-based company, Dussmann Technical Solutions division is further expanding its range of services in the field of automation. “By investing in neogramm, our portfolio in technical plant engineering now also includes software solutions for industrial digitalization”, says Dr. Tino Weber, Managing Director of Dussmann Technical Solutions.

At neogramm, more than 35 specialists develop software solutions in IIoT, automation technology and AI-supported image processing for industrial customers from the automotive, electronics manufacturing, wood and metal processing, pharmaceuticals and mechanical and plant engineering industries. “I am looking forward to the new sales connections via Dussmann Technical Solutions, the mutual transfer of knowledge and the reciprocal expansion of our services,” says Kai Blümchen, Managing Director of neogramm. “Dussmann’s investment enables neogramm to secure growth for its existing business while significantly advancing product development at the same time,” adds second neogramm Managing Director Stephan Könn.

Joint development of tailored IIoT system solutions

Dussmann Technical Solutions laid the foundation for the expansion of its automation business back in March of this year with the acquisition of “automatic Klein” and the establishment of the “Dussmann Industrial Automation” business unit, which focuses on process-related plant automation.

In the future, Dussmann Technical Solutions’ services will be complemented by the expertise of neogramm and will include even more solutions that create transparency, optimize processes and control complex systems at a higher level.

About Dussmann:

Dussmann provides solutions in the fields of integrated facility management, food services, and technical plant and systems engineering. Dussmann Facility Management encompasses services spanning the full range of integrated facility management: building cleaning, security services, building technology, and mobility services. Dussmann Food Services encompasses dining concepts for children, employees, patients, and seniors. Dussmann Technical Solutions operates in the fields of electrical engineering, cooling, refrigeration and air conditioning technology, elevator technology, and process automation, offering industrial engineering and technical services. Dussmann the largest division of the Dussmann Group, an international family company that has nearly 66,000 employees in 21 countries, offering a full range of services having to do with people.

About neogramm:

neogramm stands for new programming. As a system integrator for industrial manufacturing and machine and plant construction, the Mannheim-based company sees itself as a driving force for industrial digitalization. Based on IIoT, automation and image processing (machine vision), it connects manufacturing industry with state-of-the-art information technology. Through its interface function between software and the shop floor, neogramm manages not only to optimize the control of physical processes in industrial and infrastructural facilities through sustainable system solutions, but above all make them viable for the future. The focus is on designing and implementing practice-oriented solutions that meet the requirements of modern industry. The company serves well-known customers from various industries, including automotive, electronics manufacturing, wood and metal processing, pharmaceuticals, and mechanical and plant engineering. By working closely with its customers and encouraging a collaborative work culture,

neogramm always keeps up with the times and develops innovative solutions that meet the ever-changing requirements of Industry 4.0.
